

VAMC PROVIDER GUIDE

Bladder Management System for Men

External, non-invasive urine collection. Two body interface options.
Sensor-driven pump technology activates when urine is detected.

PATIENT CONSIDERATIONS

For men with urinary incontinence, including those with spinal cord injury (SCI), traumatic brain injury (TBI), amyotrophic lateral sclerosis (ALS), multiple sclerosis (MS), or other conditions affecting continence or mobility. Select based on clinical assessment, anatomy, skin condition, activity, and patient / caregiver's ability to use the system.

URINCare CUP

NO ADHESIVES REQUIRED

External CUP is held in place by a male harness / undergarment.

Consider for adhesive sensitivity or fragile skin. Provides access for intermittent catheterization, if needed.

URINCare FLO

CONDOM STYLE INTERFACE

Hydrocolloid adhesive holds the external FLO condom catheter in place, securely.

Consider for active users and nighttime user who are side sleepers. Sensor-equipped hose connects to the pump.
